

MUHAMMAD BAQIR NAWAZ

Junior DevOps Engineer | AWS · Kubernetes · Docker · Terraform · CI/CD

baqirnawazm@gmail.com | +92 313 0615284 | Islamabad, Pakistan (Open to Remote) | github.com/baqir-ops | linkedin.com/in/baqir-nawaz-devops

PROFESSIONAL SUMMARY

Self-taught Junior DevOps Engineer with hands-on production-style experience deploying, automating, and troubleshooting cloud infrastructure on AWS. Skilled in Docker, Kubernetes (EKS), Terraform, Helm, and GitHub Actions CI/CD. Reduced deployment time from 45 minutes to under 2 minutes through automated pipelines; migrated workloads from Minikube to Amazon EKS with autoscaling (HPA) and zero-downtime rollouts. Diagnosed and resolved real production incidents including IAM AccessDeniedException, ImagePullBackOff, and ALB 503 errors. Seeking a remote Junior/Associate DevOps Engineer role.

TECHNICAL SKILLS

- **Cloud & AWS:** EC2, VPC, IAM, ECS Fargate, ECR, ALB, CloudWatch, Amazon EKS, eksctl, Security Groups, Target Groups, S3
- **Containers & Kubernetes:** Docker, Docker Compose, Kubernetes, Pods, Deployments, Services, Ingress (NGINX), Horizontal Pod Autoscaler (HPA), Helm 3, Minikube
- **CI/CD & Automation:** GitHub Actions, GitFlow, Branch Protection, Approval Gates, Self-Hosted Runners, Bash, YAML, Makefile
- **Infrastructure as Code:** Terraform, HCL, Variables, Modules, Remote State (S3), DynamoDB State Locking
- **Linux & Troubleshooting:** Ubuntu, SSH, systemctl, journalctl, cron, file permissions, curl, netstat
- **Monitoring & Observability:** Prometheus, Grafana, PromQL

PROFESSIONAL EXPERIENCE

Junior DevOps Engineer — Lucidya

2022 – 2024

- Supported containerized application deployments using Docker and Kubernetes, maintaining consistent build and runtime environments across development and staging.
- Assisted in building and maintaining CI/CD pipelines with GitHub Actions to automate testing, image builds, and deployments, reducing manual release effort.
- Provisioned and monitored AWS resources (EC2, IAM, S3, CloudWatch), and used Linux administration (SSH, systemctl, journalctl) to troubleshoot service and connectivity issues.

HANDS-ON DEVOPS PROJECTS

Amazon EKS Kubernetes Deployment with Helm — EKS, eksctl, Helm 3, ECR, NGINX Ingress, HPA, GitHub Actions, Flask, Docker github.com/baqir-ops/flask-eks-hpa

- Migrated a containerized Flask application from Minikube to Amazon EKS with Helm-based release management.
- Built a 71-second GitHub Actions CI/CD pipeline: build image → push to ECR → deploy via helm upgrade --install.
- Configured liveness/readiness probes, CPU limits, and non-root multi-stage Docker builds; implemented HPA scaling 2→6 pods at 60% CPU.
- Diagnosed and resolved IAM AccessDeniedException, ImagePullBackOff, and NGINX Ingress routing conflicts.

AWS ECS Fargate Flask CI/CD Deployment — ECS Fargate, ECR, ALB, CloudWatch, Docker, Gunicorn, Flask, GitHub Actions github.com/baqir-ops/aws-ecs-flaskci

- Deployed a Dockerized Flask application on ECS Fargate with ECR, ALB, CloudWatch logging, and Gunicorn.
- Automated CI/CD with GitHub Actions, cutting deployment time from 45 minutes to under 2 minutes.
- Configured ALB target groups and health checks; diagnosed and fixed 503 errors, unhealthy targets, and rollback triggers.

Multi-Environment CI/CD Pipeline — GitHub Actions, Docker, Flask, pytest, GitHub Environments, Docker Hub, Self-Hosted Runner github.com/baqirops/multi-env-cicd

- Designed a GitFlow-based CI/CD pipeline across development, staging, and production environments.
- Added automated pytest testing, branch protection rules, and manual approval gates before production deploys.
- Resolved Python PEP 668 dependency conflicts, Docker port collisions, and self-hosted runner execution errors.

Terraform AWS Infrastructure Automation — Terraform, HCL, AWS EC2, Security Groups, S3 Remote State, DynamoDB Locking

- Built AWS infrastructure as code with Terraform: EC2 instances, security groups, key pairs, and AMI data sources.
- Configured S3 remote state and DynamoDB state locking for team-ready, collaborative IaC workflows.
- Used variables, outputs, and reusable modules across the full workflow: init, validate, plan, apply, destroy.

Docker Compose Multi-Container Health Monitoring — *Docker Compose, Flask, Alpine, Healthchecks*

- Built a multi-container Flask dashboard with an Alpine sidecar, using HEALTHCHECK directives and depends_on: service_healthy for dependency-aware startup.

EDUCATION & CERTIFICATIONS

- MS Computer Science — Ghazi University, Dera Ghazi Khan (2019 – 2021)
- BSc Electronics Engineering — The Islamia University of Bahawalpur (2013 – 2017)
- AWS Certified Cloud Practitioner (CLF-C02) — In Progress
- 15+ AWS SimuLearn hands-on cloud labs completed
