

MUHAMMAD BAQIR NAWAZ

Junior DevOps Engineer

Dera Ghazi Khan, Pakistan | Open to Relocate | baqirnwz@gmail.com | 03362163737
github.com/baqir-ops | linkedin.com/in/baqir-nawaz-devops

Professional Summary

Hands-on Junior DevOps Engineer with practical experience building AWS, Kubernetes, Terraform, Docker, CI/CD, and GitOps environments through production-style projects. Built a four-repository GitOps platform on Amazon EKS using Argo CD, GitHub Actions OIDC, immutable image promotion, Terraform, and Prometheus/Grafana/Alertmanager. Experienced in troubleshooting IAM permission errors, Kubernetes ImagePullBackOff, Ingress conflicts, ALB/ECS 503s, deployment failures, and CI/CD workflow issues.

Technical Skills

Cloud:	AWS EKS, EC2, ECS Fargate, ECR, ALB, VPC, IAM, S3, CloudWatch
Containers:	Docker, Docker Compose, Kubernetes, Helm 3, NGINX Ingress, HPA, Minikube
CI/CD:	GitHub Actions, GitLab CI, Jenkins, GitFlow, Branch Protection, Approval Gates
GitOps:	Argo CD, declarative deployments, automated sync, self-healing, drift detection
IaC:	Terraform, HCL, reusable modules, S3 remote state, DynamoDB state locking, Ansible
Linux/Scripting:	Ubuntu Linux, Bash, Python, SSH, systemctl, journalctl
Monitoring:	Prometheus, Grafana, Alertmanager, ELK/Kibana, CloudWatch
Security:	OIDC, IAM least privilege, Trivy, Snyk, encrypted storage, secrets management

Selected DevOps Projects

Secure GitOps Platform — AWS EKS

[GitHub](#)

AWS EKS • Terraform • Argo CD • GitHub Actions • Helm • Prometheus • Grafana

- Designed a four-repository GitOps architecture separating application source, image delivery, GitOps desired state, and deployment reconciliation.
- Implemented GitHub Actions with AWS OIDC authentication and immutable SHA-based image promotion across development, staging, and production without rebuilding the image.
- Configured Argo CD ApplicationSet with automated synchronization, self-healing, and pruning to reconcile Kubernetes resources with Git.
- Provisioned AWS VPC, EKS, IAM, and ECR infrastructure using Terraform with security-focused configuration and least-privilege access.
- Deployed Prometheus, Grafana, and Alertmanager with ServiceMonitors for application observability across environments.
- Investigated and resolved a GitHub Actions matrix/status-check issue and documented the remaining alerting configuration gap.

Flask EKS / Helm CI/CD

[GitHub](#)

Python Flask • Docker • ECR • EKS • Helm • HPA • GitHub Actions

- Migrated a containerized Flask application from Minikube to AWS EKS using Helm, ECR, HPA, probes, and NGINX Ingress.
- Built a GitHub Actions pipeline that builds and pushes Docker images to ECR and performs Helm-based deployment to EKS.
- Optimized the CI/CD workflow to complete deployment in approximately 71 seconds during project testing.
- Configured HPA-based autoscaling with separate development and production replica requirements and CPU utilization targets.
- Troubleshooted IAM permission failures, Dockerfile path issues, NGINX Ingress conflicts, and ImagePullBackOff caused by an unavailable ECR image tag.
- Used Helm rollback to recover from failed deployment revisions while maintaining workload availability during troubleshooting.

Terraform AWS Infrastructure as Code

[GitHub](#)

Terraform • AWS • VPC • EC2 • IAM • S3 • DynamoDB

- Built AWS infrastructure using Terraform covering EC2, security groups, key pairs, VPC components, variables, outputs, providers, and data sources.
- Implemented reusable Terraform modules and remote state using Amazon S3 with DynamoDB state locking.
- Practiced the Terraform workflow: `terraform init`, `plan`, `apply`, and `destroy`.
- Structured infrastructure configuration for repeatable and version-controlled AWS provisioning.

Additional DevOps Projects

AWS ECS Flask CI/CD

[GitHub](#)

AWS ECS Fargate • ECR • ALB • Docker • CloudWatch • GitHub Actions

- Deployed a containerized Flask application to AWS ECS Fargate using Amazon ECR, Application Load Balancer, CloudWatch, and GitHub Actions.
- Implemented automated deployment triggered by changes to the main branch, including Docker image build and ECR push.
- Configured application health checks and CloudWatch logging for deployment verification and operational troubleshooting.
- Investigated unhealthy target groups, ALB 503 responses, networking issues, ECS deployment circuit-breaker failures, and service naming errors in CI/CD.

Multi-Environment CI/CD Pipeline

[GitHub](#)

GitHub Actions • GitFlow • Docker • Flask • Docker Hub • Ubuntu

- Implemented a three-environment CI/CD workflow using GitFlow branches for development, staging, and production.
- Configured GitHub Actions for automated testing, Docker image builds, registry publishing, and environment-specific deployment workflows.
- Used GitHub Environments and manual approval gates to control production promotion.
- Configured a self-hosted Ubuntu runner with Docker to execute CI/CD workloads.

Additional Practical Experience

- **AWS Production Outage Simulation & RCA:** Practiced structured incident response, AWS troubleshooting, root-cause analysis, and recovery procedures.
- **AWS 3-Tier Architecture:** Designed a web/application/database architecture using AWS networking and security components.
- **AWS EC2 SSH Troubleshooting:** Practiced diagnosing connectivity, security group, key, networking, and Linux access issues.
- **Docker & Linux Labs:** Hands-on practice with Docker networking, volumes, Compose, health checks, Linux permissions, processes, filesystems, networking, archiving, and Bash scripting.

Professional Experience

Assistant Manager — Unicore Cables

2021 – 2024

Lahore, Pakistan

- Managed inventory records, stock movement, and operational documentation to support day-to-day production activities.
- Coordinated material availability with production requirements and communicated with vendors regarding procurement and supply needs.
- Maintained invoices, reports, records, and supporting documentation with attention to accuracy and operational continuity.
- Worked across operational teams to resolve supply and inventory issues under time-sensitive production requirements.

Education

Master of Science in Information Technology (MS IT)

2018 – 2020

Ghazi University

Bachelor of Science in Electronics Engineering (BSc)

2013 – 2017

The Islamia University of Bahawalpur
